# Tsunami Hazard Worksheet/CGS

Instructions for online access to California Tsunami Maps

## Part 1: Tsunami Basics

Log onto:

[http://www.conservation.ca.gov/cgs/information/publications/cgs\\_notes/Documents/CGS\\_Note\\_55.pdf](http://www.conservation.ca.gov/cgs/information/publications/cgs_notes/Documents/CGS_Note_55.pdf)

The page that comes up should have "TSUNAMIS Note 55" across the top. Read the first paragraph titled "What is a tsunami?"

1. What is one way a tsunami can be generated?

Earthquakes can create a significant upward movement of the sea floor, resulting in a rise or mounding of water at the ocean surface.

2. What is one difference between a tsunami and a normal wave that breaks on the beach?

Tsunamis don't break once they reach the beach and they're velocity.

Read the next two sections titled "Tsunami Warning Signs" and "Tsunami Hero."

3. What should you do if you are at the beach and feel strong shaking from an earthquake?

Do not stay near the ocean; get somewhere not susceptible to the tsunami and get to higher ground.

4. What did Tilly Smith see that warned her that a tsunami was coming?

She noticed that the tide was rushing out and weirdly bubbling.

Scroll down until the top of page 2 appears. Read the section titled "Tsunami Hazards in California."

5. Tsunamis can be caused by either local or distant earthquakes.

Of the five tsunamis that are described, circle the year of the one that you think was the worst and explain why on the space below:

1700    1812    1946    1964    2011

I think the tsunami of 1946 was the worst, because the magnitude reached 8.8 and had flooding up to 1,000 feet in Half Moon Bay.

Close the "TSUNAMIS Note 55" page.
